

# Environmental Policy

Galam will act to protect the environment as required by law and from a sense of responsibility to the environment and the community.

## *Galam will handle the environmental aspects as follows:*

- » We aim to treat wastewater in a manner that will prevent contamination of the soil, water and air.
- » Galam will act to reduce air pollution by reducing particle emissions into the air and use of low-sulfur fuel.
- » Galam will plan its facilities in accordance with the adoption of best available technologies both environmentally and economically.
- » Galam shall take managerial measures in saving and reducing energy resources.
- » Galam has an effective system for the treatment and disposal of solid waste.
- » Galam undertakes to treat solid waste in a manner that will eliminate environmental hazards.
- » Galam will reduce the amount of solid waste evacuated from the plant.
- » Galam undertakes to give priority to waste treatment methods such as reclamation, recycling, reuse and reduction at source in order to reduce the amount of waste transferred to landfills and with the aim of saving natural resources.
- » Galam ensures proper maintenance of hazardous materials secondary containers and implements control systems for overfilling tanks to prevent soil pollution.
- » Galam works towards saving water in production processes.
- » Galam will operate to maintain the cleanliness and appearance of the plant to enable a comfortable and safe working area.
